A

GSEA — Muscle

Top 20 pathways in CRC vs CTL

Genes defining epithelial-mesenchymal transition, as in wound healing, fibrosis and metastasis.
A subgroup of genes regulated by myc - version 1 (v1).
Hallmark

Actin cytoskeleton organization
Proteasomal protein catabolic process
GO:BP

Actin cytoskeleton
Intracellular protein-containing complex
External encapsulating structure
Contractile muscle fiber
Organelle subcompartment
Microtubule
GO:CC

Actin binding
Transition metal ion binding
Atp-dependent protein folding chaperone
GO:MF

Proteasome
KEGG

Abc transporter disorders
Gastrulation
Proteasome assembly
Metabolism of amino acids and derivatives
Protein folding
Cilium assembly
Reactome

CRC vs CTL
CRC+RET vs CTL
CRC+RET vs CRC

B

GSEA — Muscle

Top 20 pathways in CRC+RET vs CRC

Genes defining epithelial-mesenchymal transition, as in wound healing, fibrosis and metastasis.
Genes encoding proteins involved in oxidative phosphorylation.
Hallmark

Actin cytoskeleton organization
Organelle assembly
GO:BP

Actin cytoskeleton
External encapsulating structure
Focal adhesion
Contractile muscle fiber
Cell cortex
Cell leading edge
Respiratory chain complex
Ribosome
GO:CC

Structural molecule activity
Actin binding
Magnesium ion binding
Cell adhesion molecule binding
Proton transmembrane transporter activity
Catalytic activity, acting on a protein
GO:MF

Cytoskeleton in muscle cells
Motor proteins
KEGG

CRC vs CTL
CRC+RET vs CTL
CRC+RET vs CRC

C

GSEA — Plasma

All significant pathways

Genes encoding components of blood coagulation system; also up-regulated in platelets.
Genes encoding components of the complement system, which is part of the innate immune system.
Genes encoding proteins involved in processing of drugs and other xenobiotics.
Hallmark

Complement and coagulation cascades
Staphylococcus aureus infection
Metabolic pathways
KEGG

Formation of fibrin clot (clotting cascade)
Reactome

CRC vs CTL
CRC+RET vs CTL
CRC+RET vs CRC
